INDEX.

	PAGE.
Introduction, by Rev. Moses Harvey, LL.D.,.....	3 to 4
Remarks in connection with the loss of different steamers.....	5
The greatest number of seals brought in, in one year, in one trip.....	5
The greatest number of seals brought in, in one year, in two trips.....	5
The trip of the s.s. <i>Commodore</i> , in 1872.....	5
The greatest weight of fat brought in, in one year, in one trip.....	5
The greatest weight of fat brought in, in one year, in two trips.....	5
The largest bill made at the sealfishery in Newfoundland, in a steamer.....	6
The largest bill made at the sealfishery in St. John's, in a steamer.....	6
Number of old and young seals, by Capt. Ed., White, sr., with average.....	6
Number of old and young seals, by Capt. Joseph Barbour, with average.....	6
Names of steamers that prosecute the sealfishery in Newfoundland, with date of first year at the Icefields.....	7
Specification of the heaviest trips of seals brought in.....	7
Report of St. John's Steam-Sealing fleet.....	8 to 22
Report of Harbor Grace Steam-sealing fleet.....	23 to 26
Records of Newfoundland Sealing Captains.....	27 to 33
Records of Newfoundland Sealing Steamers.....	34 to 38
Number of Seals brought in by each Steamer, with average per year.....	39
Number of Seals brought in by each Captain, with average per year.....	39
Number of Seals each year by steamer, from 1863 to 1894, with total.....	40
For first arrivals from the sealfishery, by steamers.....	40
Number of seals manufactured by Messrs. Bowring Brothers, in ten years.....	40

Entered according to the Act of the Legislature of Newfoundland in the year 1894, by

LEVI G. CHAFE,

at the Colonial Secretary's Office.

THE SEAL FISHERY OF NEWFOUNDLAND.

BY REV. M. HARVEY, LL.D.

The Seal Fishery of Newfoundland which has brought and continues to bring a large amount of wealth to the Colony, is comparatively of recent origin. The cod-fishery has been prosecuted for nearly four hundred years ; but the seal-fishery was of little importance till the beginning of the present century. It would appear that the attention of the people was so absorbed in capturing and curing cod-fishery, they neglected this industry, which though difficult and dangerous was capable of being made very profitable. No attention was paid to the oleaginous treasures which the vast icefields floating past, every year brought within their reach ; and the great seal-herds were left to bring forth their young amid the icy solitudes, undisturbed by the murderous gun, club and knife of the seal-hunter. But the day at length came when this paradisaical condition of the seals came to a close. Gradually the hunters forced their way through the crystal ramparts by which nature had guarded the helpless innocents. The once happy nursery of the mother-seals became a slaughter-house red with the blood of their murdered darlings slain in their icy cradles : and the spot where tender mothers once fondled in security their white-coated babies became a scene of horror and death. The annual seal-hunt now involves a vast destruction of young and old seal-life for the benefit of man, the lord of creation, and for the advancement of our modern civilization with its ever-increasing wants.

The value of the seal for human usage, and the right method of hunting it.

sealing. In 1707 the seal oil exported had risen in value to £8,832 ; and in the following year to £12,664. In 1769 it fell to £5,375 ; and in 1772 it rose to £13,406. The largest export mentioned in these returns was that of 1773 when its value was £26,388. During the following years it fluctuated greatly, just as it does at the present time,—sometimes sinking to £3,000 and only once exceeding £11,000 in value. The last of these returned was for 1792 when the value of the seal oil was £11,920.

The next step after taking seals in nets was shooting them from large boats which sailed about the middle of April. At that time of the year the young seals had left their icy cradles and taken to the water, so that only a few could be reached by the gun of the hunter. As late as 1795, the whole annual catch of seals only amounted to 5000.

At length an important advance in this industry was made by fitting out small schooners of from 30 to 50 tons, carrying from 12 to 18 men, the outfit of each vessel costing about £75. The vessels were stoutly built and had certain appliances for encountering ice. They did not at first leave port till after March 21st, in order to avoid the equinoctial gales—or "St. Patrick's brush" as it was called—

Soon, however, they learned by experience the advantage of making an earlier start in order to reach the young harps before they had taken to the water. The 1st of March at length became the usual time of starting for the ice. In these little schooners the men speedily acquired hardihood and daring, and became expert in battling with the floes. The people of Conception Bay led the way in this new enterprise ; and Carbonear, Harbour Grace, Bay Roberts, Cupids and especially Brigus became centres of the sealing industry. The skippers of these little vessels of from 40 to 80 or 100 tons became renowned as "mighty hunters" of seals, and many of them acquired considerable wealth. The crews also shared in the profits, and comfort and abundance prevailed in these sealing towns and villages. St. John's, the capital, soon followed ; and possessing advantages in its situation for starting for the ice, its enterprising people had speedily a small fleet employed in this hazardous but often lucrative industry. One hundred vessels used to leave the port of St. John's for the ice-fields.

There can be little doubt that in those days seals were much more numerous and were taken nearer shore and further south than at the present time. So remunerative was this employment that its expansion was wonderfully rapid up to 1815, when the whole business of the country sustained a severe shock by the termination of the wars between England and France. The following figures illustrate this expansion :—

THE SEAL FISHERY OF NEWFOUNDLAND.

BY REV. M. HARVEY, LL.D.

The Seal Fishery of Newfoundland which has brought and continues to bring a large amount of wealth to the Colony, is comparatively of recent origin. The cod-fishery has been prosecuted for nearly four hundred years; but the seal-fishery was of little importance till the beginning of the present century. It would appear that the attention of the people was so absorbed in capturing and curing cod-fishery, they neglected this industry, which though difficult and dangerous was capable of being made very profitable. No attention was paid to the oleaginous treasures which the vast icefields floating past, every year brought within their reach; and the great seal-herds were left to bring forth their young amid the icy solitudes, undisturbed by the murderous gun, club and knife of the seal-hunter. But the day at length came when this paradisaical condition of the seals came to a close. Gradually the hunters forced their way through the crystal ramparts by which nature had guarded the helpless innocents. The once happy nursery of the mother-seals became a slaughter-house red with the blood of their murdered darlings slain in their icy cradles: and the spot where tender mothers once fondled in security their white-coated babies became a scene of horror and death. The annual seal-hunt now involves a vast destruction of young and old seal-life for the benefit of man, the lord of creation, and for the advancement of our modern civilization with its ever-increasing wants.

The value of the seal for human uses, and the right method of capturing it in these regions were slowly learned. At first seals were taken in nets which were placed between the shore and some island or rock at no great distance. In their migratory movements the seals go south along the shore during the early part of winter, and by means of nets placed in these narrow passages a few were taken. L'Abbe Raynal tells us that even previous to the year 1763, English fishermen were in the habit of repairing to certain favourable places in order to capture seals in nets, in the way referred to. The same method is still pursued in some parts of the northern coast of the island, and also on Labrador, especially in capturing the bay or shore seal which is non-migratory.

This net-fishery must have been supplemented by other methods of taking seals on the ice in spring, either by shooting them casually or taking them along shore when the ice was pressed in on the coast by continuous easterly winds, as not infrequently is still done. A notable instance occurred this year (1894) when it is calculated 120,000 seals were taken from the shore. The increasing "catch" of seals, in those early years, is shown in the annual returns made by the admirals commanding on the Newfoundland station, to the Board of Trade. The first time this item of seal oil as an article of export is mentioned in these returns is in 1749, when its value for that year is stated to have been £1,006 sterling. In 1767 the seal oil exported had risen in value to £8,832; and in the following year to £12,664. In 1769 it fell to £5,375; and in 1772 it rose to £13,406. The largest export mentioned in these returns was that of 1773 when its value was £26,388. During the following years it fluctuated greatly, just as it does at the present time,—sometimes sinking to £3,000 and only once exceeding £11,000 in value. The last of these returned was for 1792 when the value of the seal oil was £11,920.

The next step after taking seals in nets was shooting them from large boats which sailed about the middle of April. At that time of the year the young seals had left their icy cradles and taken to the water, so that only a few could be reached by the gun of the hunter. As late as 1795, the whole annual catch of seals only amounted to 5000.

At length an important advance in this industry was made by fitting out small schooners of from 30 to 50 tons, carrying from 12 to 18 men, the outfit of each vessel costing about £75. The vessels were stoutly built and had certain appliances for encountering ice. They did not at first leave port till after March 21st, in order to avoid the equinoctial gales—or "St. Patrick's brush" as it was called—

Soon, however, they learned by experience the advantage of making an earlier start in order to reach the young harps before they had taken to the water. The 1st of March at length became the usual time of starting for the ice. In these little schooners the men speedily acquired hardihood and daring, and became expert in battling with the floes. The people of Conception Bay led the way in this new enterprise; and Carbonear, Harbour Grace, Bay Roberts, Cupids and especially Brigus became centres of the sealing industry. The skippers of these little vessels of from 40 to 80 or 100 tons became renowned as "mighty hunters" of seals, and many of them acquired considerable wealth. The crews also shared in the profits, and comfort and abundance prevailed in these sealing towns and villages. St. John's, the capital, soon followed; and possessing advantages in its situation for starting for the ice, its enterprising people had speedily a small fleet employed in this hazardous but often lucrative industry. One hundred vessels used to leave the port of St. John's for the ice-fields.

There can be little doubt that in those days seals were much more numerous and were taken nearer shore and further south than at the present time. So remunerative was this employment that its expansion was wonderfully rapid up to 1815, when the whole business of the country sustained a severe shock by the termination of the wars between England and France. The following figures illustrate this expansion:—

YEARS.	SEALS TAKEN.
1805	81,088
1815	126,315
1820	213,679
1822	306,982
1826	222,007
1829	357,523
1830	558,942
1831	686,850
1832	508,407
1836	384,321
1840	631,375
1844	685,530
1848	521,004
1852	534,378

These were the "good old times" to which the hunters of these days of steamers look back with envy and regret. In 1853 the decadence of the seal-fishery commenced, and for the next ten years, the average catch diminished considerably, though the number of sealing vessels had increased greatly. The following figures prove this :—

YEARS.	SEALS TAKEN.
1855	298,003
1856	343,317
1858	377,624
1859	329,185
1860	444,102
1861	375,282
1862	268,624

In 1857 there were 400 vessels of from 70 to 200 tons engaged in the seal-fishery, their united crews numbering 13,000 men. The average annual value of the seal-fishery at that period was from a million to a million and quarter dollars.

In the year 1863 the great innovator steam entered the field, and the first steamer took part in the seal-fishery. The value of steam in connection with Arctic explorations had been previously demonstrated; and its introduction speedily revolutionized the seal-fishery. The sailing vessels were gradually driven out of the field and the number of steamers increased. In 1866 there were 177 sailing vessels and only 5 steamers. In 1873 there were 18 steamers; in 1882 there were 25 steamers. At present there are 21 steamers, and the number of sailing vessels is small. The tendency is to eliminate men wherever machinery is introduced. The work is now carried on with far fewer hands. Not more than 5,000 men are employed in this industry. In a short time sailing vessels in this industry will be a thing of the past.

Mr. L. G. Chafe has kept a full and accurate account of the work done by steamers, in connection with the Seal Fishery, during the thirty years which have elapsed since 1863. These statistics he has now decided on publishing; and as a record of one of our great industries they will be found valuable and interesting, and I doubt not his publication will obtain a large circulation. He has asked me to write this brief preface in order to furnish a sketch of the Newfoundland Seal Fishery since its initiation—a request with which I willingly comply.

There can be no doubt that the fishermen have suffered by the introduction of steamers in the prosecution of this industry. The numbers employed have been reduced by more than one-half, and they now receive one-third of the value of the seals taken by each vessel instead of one-half which was their share in sailing vessels. The great difficulty now with them is to get berths on board the steamers, and hundreds are every year left behind. The reduction of wages is a matter of necessity, owing to the heavy expense incurred in fitting out sealing steamers and keeping them in good condition. Owing to the precarious nature of this industry, and the recent decline in the price of seal oil in consequence of the introduction of mineral and vegetable oils as a substitute for seal oil in various manufactures, the profits of capitalists who own the steamers have not been large in recent years, so that the number of steamers is likely to diminish rather than increase. In 1893 there was a disastrous failure, only 128,339 seals being taken; and including the number taken from the shore this year, the whole catch will not probably exceed 262,000. The 21 steamers engaged this year have only captured 152,821 seals. It is a mistake therefore to suppose that the capitalists get an undue share of the profits. There losses at times are very serious, and the returns on their outlay on an average very moderate.

It is, I think, a mere dream to expect steamers to be withdrawn from this fishery, and sailing vessels to be restored. As well may we hope to abolish railways and revert to the ancient modes of locomotion. Steamers "have come to stay;" and we have to submit to destiny. Now that wise laws have been enacted for the protection and regulation of this fishery, there seems to be no reason why it may not flourish for many years to come and continue to be one of the sources of our national wealth.

ROYAL INSURANCE Co.,

of Liverpool

The largest Fire Insurance in the world.

The net premium receipts of the Company for 1892, were

£ 2,033,063,

AS AGAINST

£ 1,585,136,

the net premium receipts of its nearest competitor.

The comparison of the Canadian business shows quite as great an advantage. The premium receipts for 1893, were

\$ 594,632,

AS AGAINST

\$ 392,115,

the premium receipts of its nearest competitor.

The public will remember this Company's promptness and liberality in settling claims arising out of the great fire of 1892.

WATER STREET, — — — ST. JOHN'S, N.F.

Remarks in connection with Newfoundland Steam Seal Fishing.

- 1862.—This year there were two steamers from Dundee, seal fishing on the Newfoundland coast, viz. the *Camperdown* and *Polynia*—They secured very few seals, and on the way home the latter steamer put into St. John's to get her propeller fixed and other repairs made so as to make a safe return to Dundee.
- 1863.—The first steamer sailed from St. John's for the seal fishery viz. the *Bloodhound* Captain Alexander Graham. The same spring the s. s. *Wolf*, Captain Wm. Kean, cleared from Pools Island, Bonavista Bay.
- 1871.—The s. s. *Wolf*, Captain Levi Diamond, was lost on her second trip, having a load of seals, off Gull Island, Cape John; crew brought home in the s. s. *Lion*, Capt. A. Graham.
- 1872.—The s. s. *Bloodhound*, Capt. Alfred Smith, was lost, also, the s. s. *Retriever*, Capt. Richard Pike. The s. s. *Nimrod*, Captain Peter Cummins, brought home the crew of the *Bloodhound*, and the s. s. *Mastiff*, Captain John Hicks, brought in the crew of *Retriever*, both were lost on April 28th.
- 1874.—The s. s. *Osprey*, Captain Samuel Blandford, was lost this year, on April 3rd, the s. s. *Panther*, Captain A. Bartlett, brought home her crew,
- 1876.—The s. s. *Hawk*, Captain Arthur Jackman, was lost this spring while on the second trip.
- 1878.—The s. s. *Mic-Mac*, Captain Samuel Bartlett, lost April 16th, off Cape John; crew brought home in the s. s. *Vanguard*, Capt. Azariah Munden.
- 1882.—The s. s. *Lion*, Captain Patrick Fowlow, was lost on January 6th, with all hands, a beautiful calm moon-light night, somewhere in the vicinity of Baccalieu Island. She was bound from St. John's to Trinity, which place she was to sail from, to the seal-fishery.
- 1883.—The s. s. *Proteus*, Captain Richard Pike, lost while on a voyage in connection with the "Greely Expedition."
- 1884.—The s. s. *Tiger*, Captain Thomas Dawe, lost in Gulf of St. Lawrence, whilst seal fishing, the sea completely burying her up; crew brought home by the s. s. *Leopard*, Captain Henry Dawe.
- 1886.—The s. s. *Resolute*, Captain Arthur Jackman, lost on the 27th March; crew landed at Greenspond by s. s. *Vanguard*, Captain Charles Dawe. The s. s. *Hercules*, belonging to steam tug Co. was despatched from St. John's for them, and returned on April 5th. Captain Jackman took charge of the s. s. *Falcon* for the second trip.
- 1893.—The s. s. *Eagle*, Captain Arthur Jackman, abandoned on September 1st, whilst whaling in Davis Straits; crew landed at Dundee by the steamships *Aurora*, *Esquimaux* and *Eclipse*.

The greatest number of seals brought in by any one steamer, in one trip, were brought by the s. s. *Neptune* Captain Samuel Blandford in 1888, numbering 42,242.

The greatest number of seals brought in by any one steamer in one year, (in two trips) were brought by the s. s. *Proteus*, Captain Richard Pike in 1875, numbering 44,377.

The greatest weight of fat (in one trip), was brought in by the s. s. *Neptune*, (465 tons register) Captain Samuel Blandford. Number of seals 41,983. Gross weight 874 tons, 2 cwt. 0 qrs., 26 lbs. Net weight 844 tons, 12 cwt., 1 qr., 0 lbs. Specification given on page

The s. s. *Commodore* of Harbor Grace 290 tons register, owned by Messrs. John Munn & Co., had a full load of seals in 1872. She was commanded by Captain Azariah Munden, and towed a quantity of seals from Baccalieu up Conception Bay on her tow rope, as far as Western Bay, where they were taken on board, and placed along with others in pounds on the deck. She arrived safely at Messrs. Munn's wharf, and was so deep that the crew could easily wash their hands over her side. Her turn out was as follows:—31,314 seals. Gross weight 655 tons, 2 cwt., 0 qrs., 23 lbs. Net weight 633 tons, 14 cwt., 3 qrs. 11 lbs. Net value \$94,927.35.

The greatest weight of fat in one year (in two trips), was brought in by the s. s. *Diana* (290 tons) formerly the *Hector*, Captain William Barbour in 1892. Seals numbering 41,104, Gross weight 1101 tons 6 cwt., 1 qr., 9 lbs. Net weight 1,021 tons, 14 cwt., 0 qrs. 15 lbs. Net value \$106,148.06. Crew 224 men, made \$184.30 each.

NEWFOUNDLAND STEAM-SEALING FLEET.

The largest bill ever made at the steam seal-fishery, was that made by the crew of the s. s. *Retriever* Captain James Murphy, owners, Ridley & Sons, Harbor Grace. The crew numbered 105 men and made \$303.00 each—two trips in 1866, 23,400 seals.

The largest bill ever made in a St. John's steamer, was that made by the crew of the s. s. *Nimrod*, Captain Peter Cummins in 1871, crew 140 men, made \$208.47 each, in two trips, 28,087 seals.

Number of seals brought in by Captain Joseph Barbour, from 1882 to 1893 (12 years), viz.:—248,620 young, 23,891 old, average for 12 years, 20,718 young, 1991 old, average per year 22,709 seals.

Number of seals brought in by Captain Edward White, Sr., from 1870 to 1881 (12 years) viz.:—181,407 young, 67,406 old, average for 12 years, 15,117 young, 5,617 old, average per year, 20,734 seals.

The heaviest second trip was brought in by the s. s. *Neptune*, Captain Edward White, Sr., in 1876, Gross weight 607 tons, 9 cwt. 3 qrs., 6 lbs. Net weight, 535 tons, 11 cwt., 3 qrs., 9 lbs. 16,746 seals. Net value. \$62,197.00

The next heaviest second trip, was by the s. s. *Esquimaux*, Captain Jeffery Philips, in 1892, Gross weight 582 tons, 6 cwt., 1 qr. 23 lbs. Net weight 523 tons, 5 cwt. 1 qr. 27 lbs., 16,155 seals. Gross weight of *Esquimaux's* two trips, 947 tons, 3 cwt., 0 qrs., 11 lbs. Net weight 874 tons, 11 cwt., 2 qrs., 25 lbs., Net value of two trips \$92,298.00.

REPORT OF ST. JOHN'S STEAM-SEALING FLEET.
